

Modem box ZSBE-M

ZSBE-M modem box

Modem box ZSBE-M for EX environment

Advantages:

- ✓ Execution - solid conclusion
- ✓ Easy installation
- ✓ Increased body resistance for use in heavy traffic
- ✓ ATEX certification

The ZSBE-M modem box is used to transmit the video signal from a stationary camera and transfer it for transmission over a telephone line.

The modem box is designed for use in underground and surface areas of mines with an increased risk of methane explosion. The modem box is part of the camera system with the KR-03 camera. A voltage of 12 VDC is output from the modem box, which can be used to power KR-03 cameras.

Important note: Technical parameters of the ZSBE-M may be changed. Please contact us for further technical advice and tailor -made solutions.
